# Andy vs. the Bureaucratic Deadwood

BY MICHAEL SEILER

Andy Lipkis, a 19-year-old college freshman very much into ecology, had this idea a couple of years ago. The trees in the San Bernardino National Forest are dying from the smog that drifts east out of Los Angeles, so find some smogreshant trees and replant them there.

After all, Lipkis thought, the experts say the forest in the Big Bear-Lake Arrowhese Sarton Flats area could be dead in as little as 20 years if nothing is done.

A pure case for a bit of individual initiative right? One young man could get the associate bandwagon rolling.

It wasn't quite that easy. There were some complications along the way. Like the bureau say of the California Division of Forestry.

Lipkis discovered a few months ago that the division had 20,000 smog-resistant Sierra reduced and sugar pines, all under a year old, growing in its tree nursery up near Davis.

Andy told the forestry people his plan. They said that it was a nice idea, but rules are rules, and the division does not give its baby trees away. I they're not sold, they're plowed under.

They cost two and one-half cents per tree and Andy wanted all 20,000 trees.
